## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Stewart.

The structure as claimed is fully anticipated by Stewart.

In particular, Stewart shows in Figs. 1-12 a direct gas burner type furnace for directly heating articles continuously fed into the furnace by combustion gas which gas is then exhausted outside the furnace thereafter, comprising:

combustion means (100) opening to the interior of the furnace,

a temperature sensor (note col. 6, lines 45-48) for detecting the furnace temperature,

exhaust fans (184) for discharging the combustion gas from the interior of the furnace to outside the furnace,

combustion rate control means (note col. 6, lines 46-56) for controlling a combustion rate of the combustion means based on the furnace temperature detected by the temperature sensors, and

Art Unit: 3749

exhaust rate control means (129, Fig. 9a) for controlling an exhaust rate of the combustion gas in the furnace by controlling the exhaust fans based on the combustion rate (note col. 7, lines 8-24).

In regard to claim 2, Stewart shows in Figs. 1-2 and 10 that the direct gas burner type furnace is provided with a circulation fan (146) for circulating the combustion gas in the furnace.

In regard to claims 3-4, Stewarts shows in Figs. 1-2 that the direct gas burner type furnace is provided with a plurality of the combustion means.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lanham, Jr. is cited to show a direct gas burner type furnace having a damper control for controlling exhaust gas.
